```

OUTPUT:

EXPLANATION:

This experiment helped me learn the basic HTML tags used to create a web page. I used headings (h1, h2, h3) to display the name, department, and course title. The paragraph (p) tag was used to write text, while the line break (br) and horizontal rule (hr) were used for formatting. I also used text formatting tags such as **bold** (b), *italic* (i), underline (u), subscript (sub), and superscript (sup). The output was successfully displayed in the web browser.
